KORONA REFLECTIONS

SPECIALTY LINE FOR POLISHED SURFACES

Application

The sleek designer appearance of TLD's Korona Reflections Line makes it a perfect choice for interior under-cabinet lighting above reflective countertops, where a high-end, dimmable bright light source is desired, while eliminating the reflective "dots" impressions created by adjacent high gloss surfaces. The Reflections fixtures, offered in four profiles, also provide display lighting with a distinguished, decorative look within glass curio cabinets or jewelry cases.

Configuration

The Reflections Line is constructed of lightweight extruded brushed aluminum in four unique shapes, presenting an upscale look for all tastes and requirements. Fixtures contain a frosted cover over a linear LED channel placed to achieve the custom desired appearance with no reflective "dots" imprints. They are offered in a full range of lengths from 7"-70". Installation allows for a variety of mounting options, in "daisy-chain" continuous run or "home-run" multiple branch configuration, making custom layout design a breeze.

Electrical/Connectors

Reflections LED fixtures are 15v DC regulated, designed with integral connectors at both ends for ease of installation.

LEDs

Fixtures are designed with TLD's select light engine, engineered for efficient thermal management and maximum longevity. Exclusive use of premium LEDs ensures consistent chromaticity for the highest quality and longest life.

Light output

The Korona Reflections Line is offered in high intensity task (KRBT), available in your choice of 3000K warm white or 3500K neutral white, to complement any design look.

Power Supplies, Dimmers and Accessories

Reflections fixtures are fully compatible with TLD's entire line of low voltage 15v DC power supplies, dimmers and accessories.

Warranty

Fixtures are rated for 50,000 hours at 70% of lamp lumen output and backed with a 6-year limited warranty by TLD, an innovative leader in LED technology.

LIGHT OUTPUT

	KRBT
Power Consumption	3W/Ft
Source Lumens per Ft - 3000K	205
Source Lumens per Ft - 3500K	225

POWER SUPPLIES AND DIMMERS

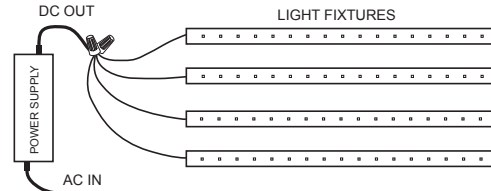

Fully compatible with TLD power supplies and dimmers.
